

SuperLearner ensemble weights (unsorted)

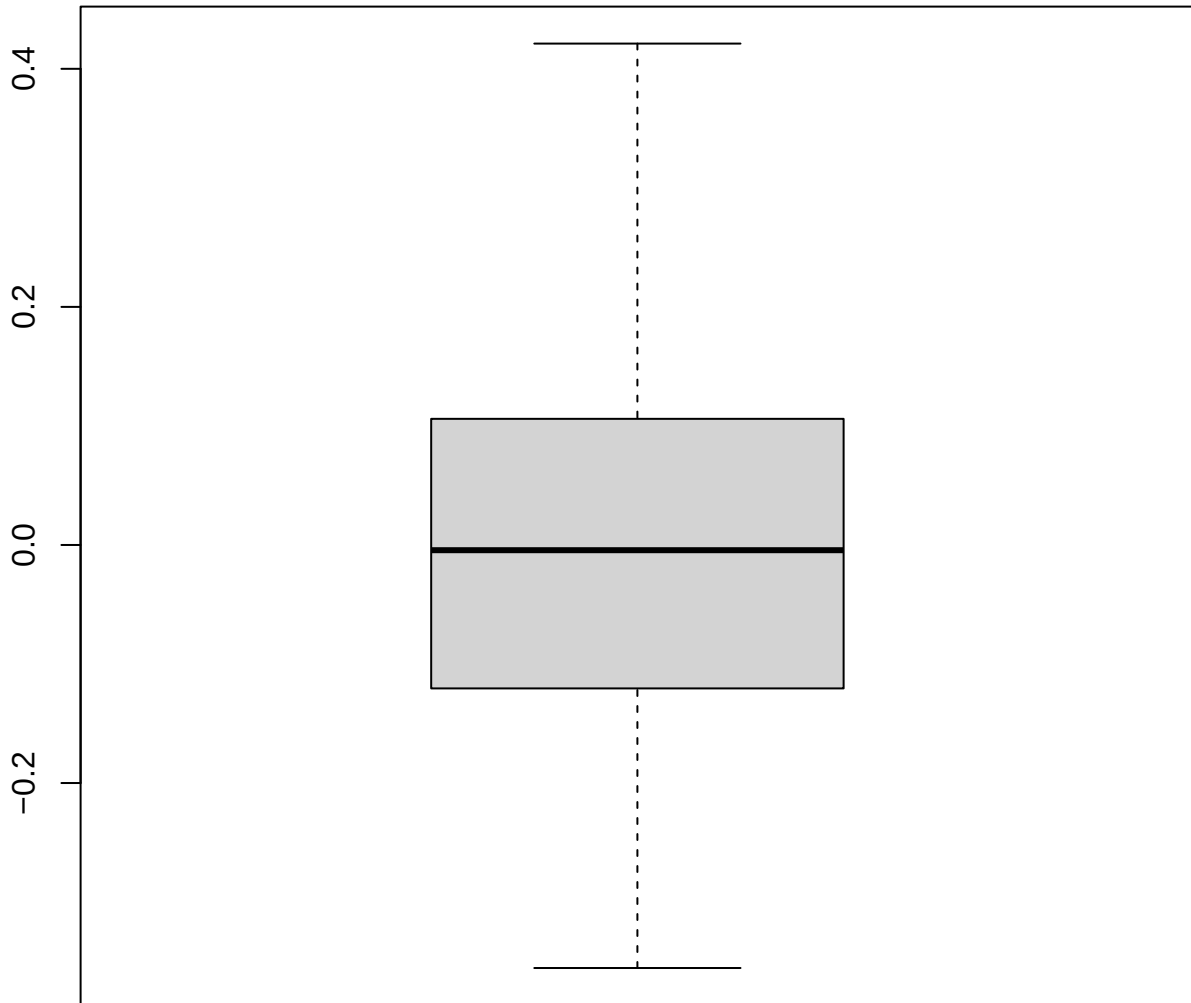

Redshift vs Bias

Redshift vs Normalized Bias

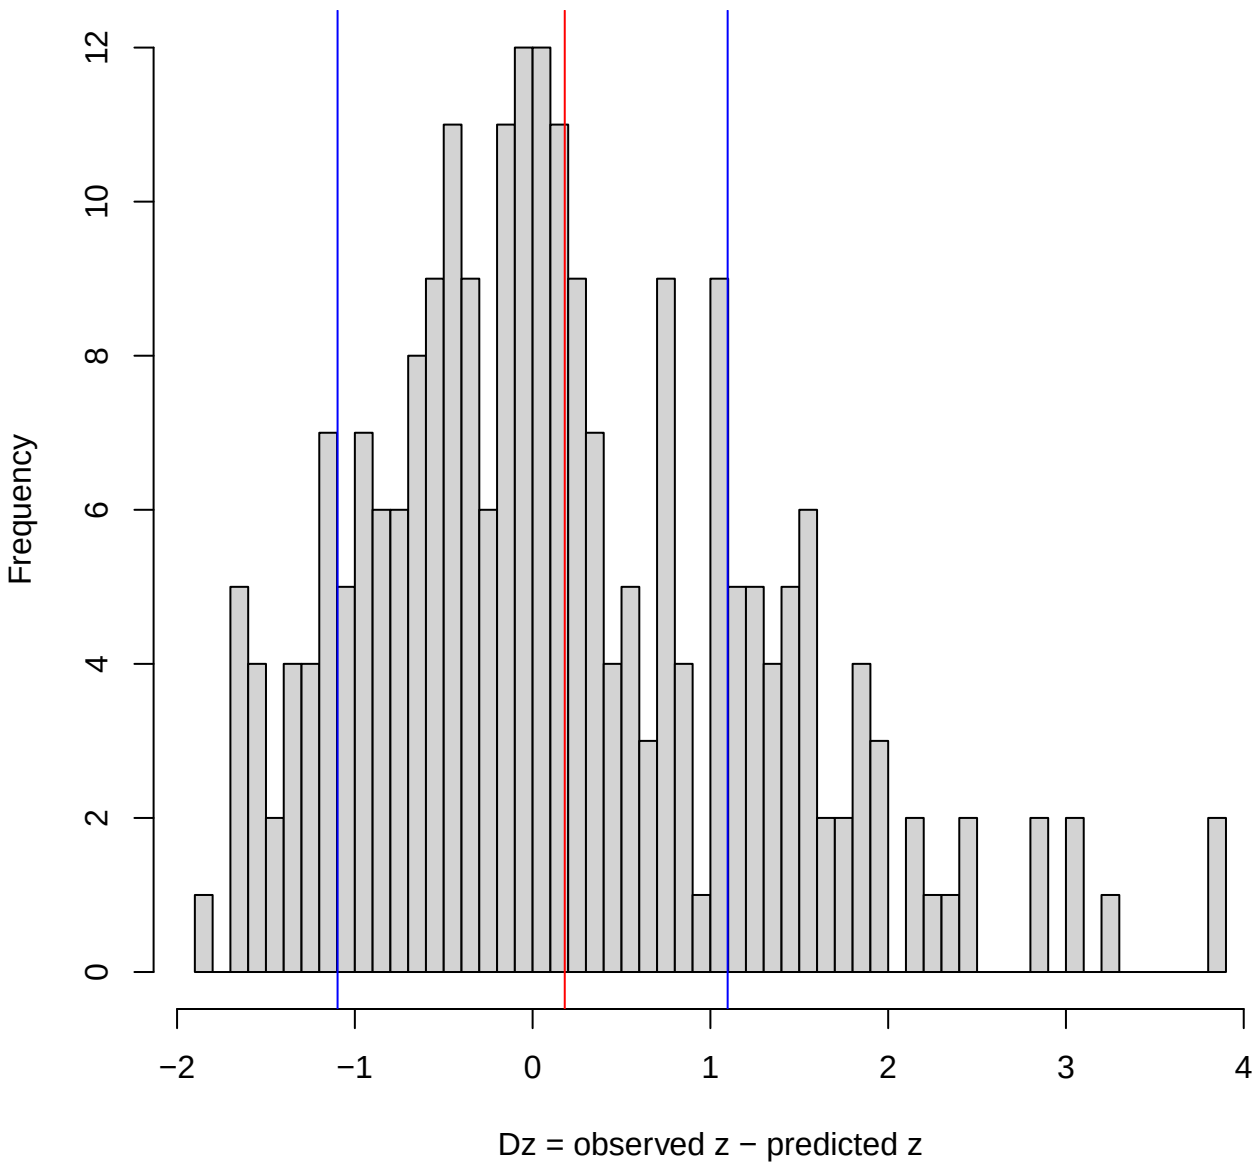

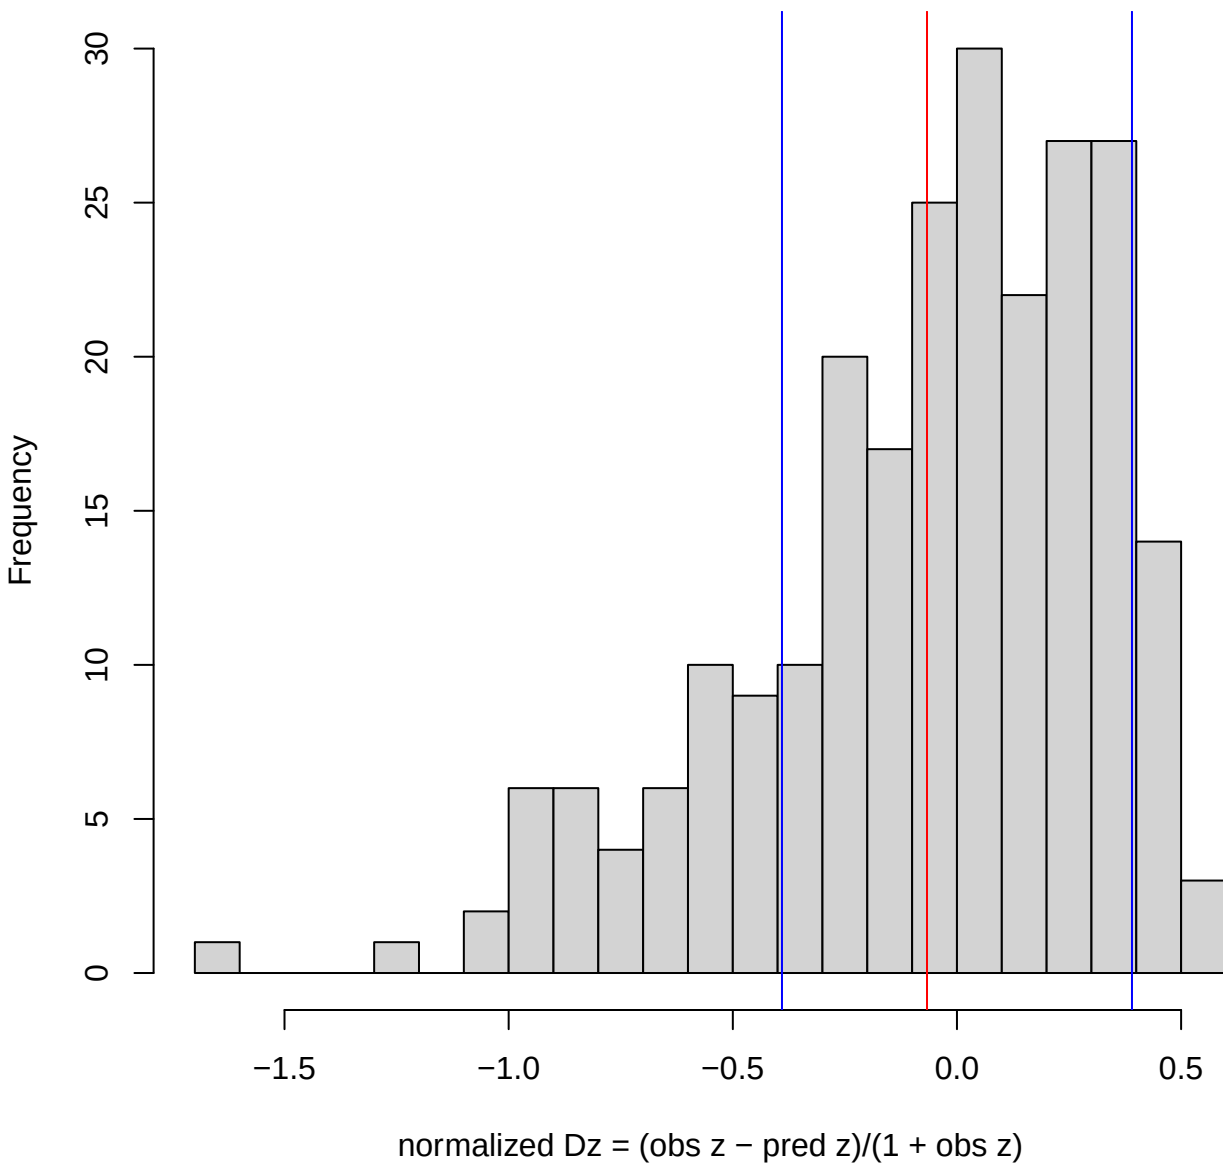

Redshift residual distribution ($Dz = \text{obs } z - \text{pred } z$)

Sigma=1.1, Bias=0.181

(blue = $\pm$ -Sigma, red = Bias)

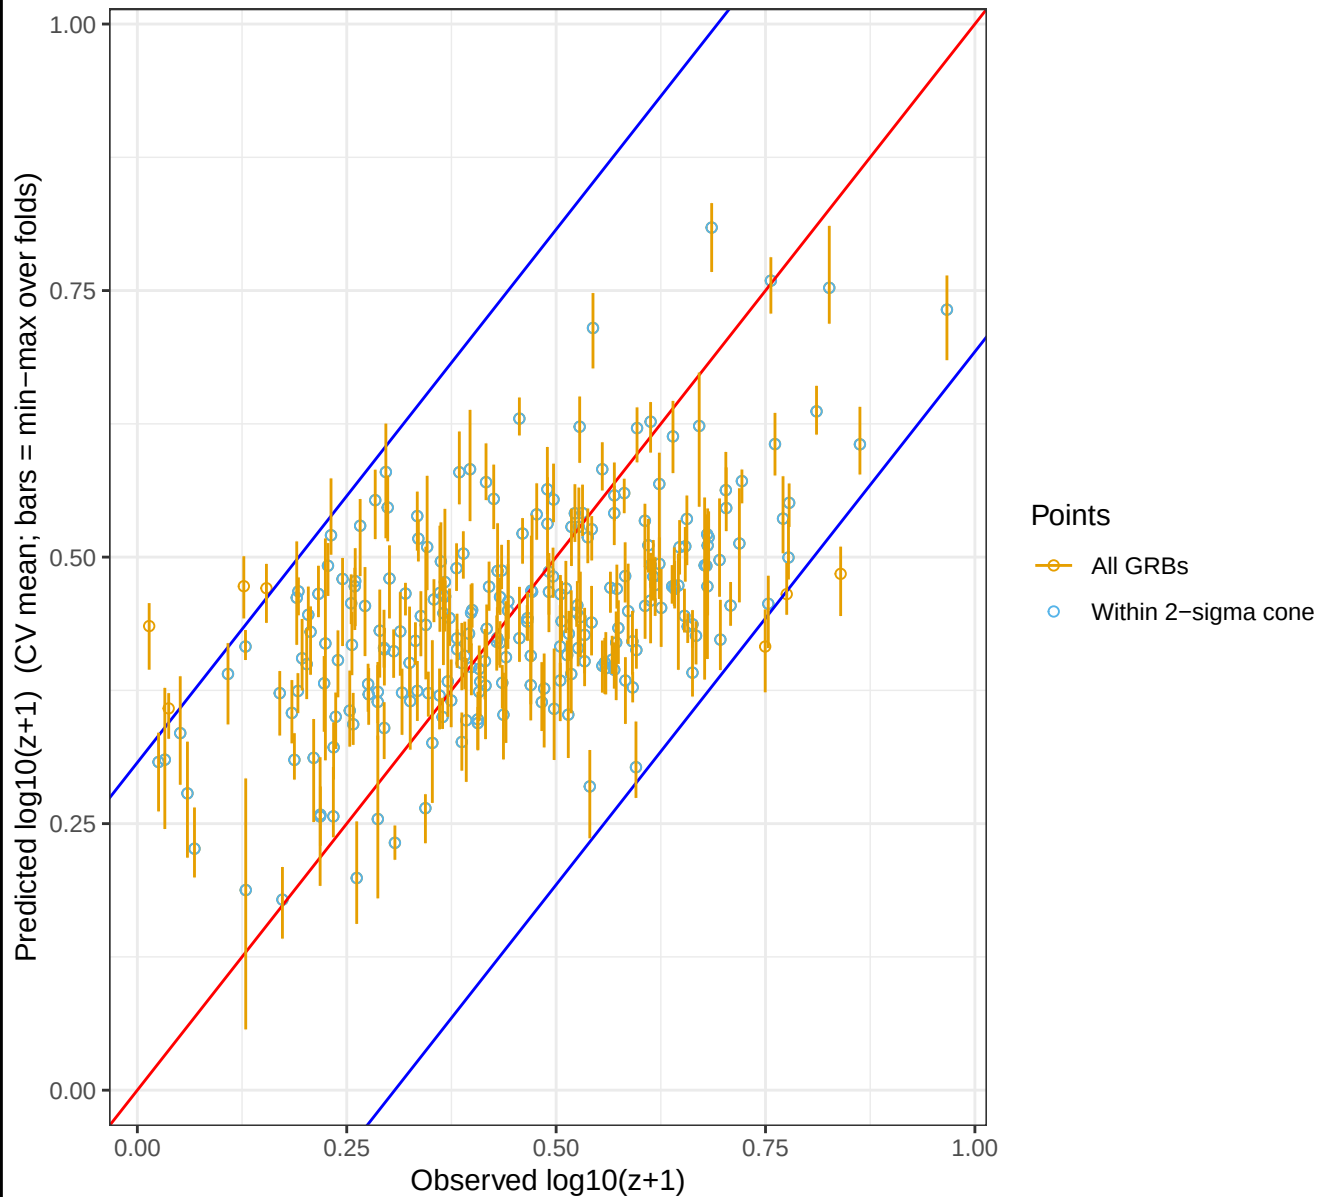

Normalized residual distribution (normalized $D_z = (\text{obs } z - \text{pred } z)/(1 + \text{obs } z)$)
Sigma=0.39, Bias=-0.0668
(blue = $\pm$ -Sigma, red = Bias)

Cross-validated predicted vs. observed $\log_{10}(z+1)$

Sample = 240 GRBs | within 2-sigma cone = 233 (97%)

$r = 0.5422$ | $\text{Sigma} = 0.154$ | $\text{RMS} = 0.153$ | $\text{Bias} = -0.00072$ | $\text{NMAD} = 0.164$

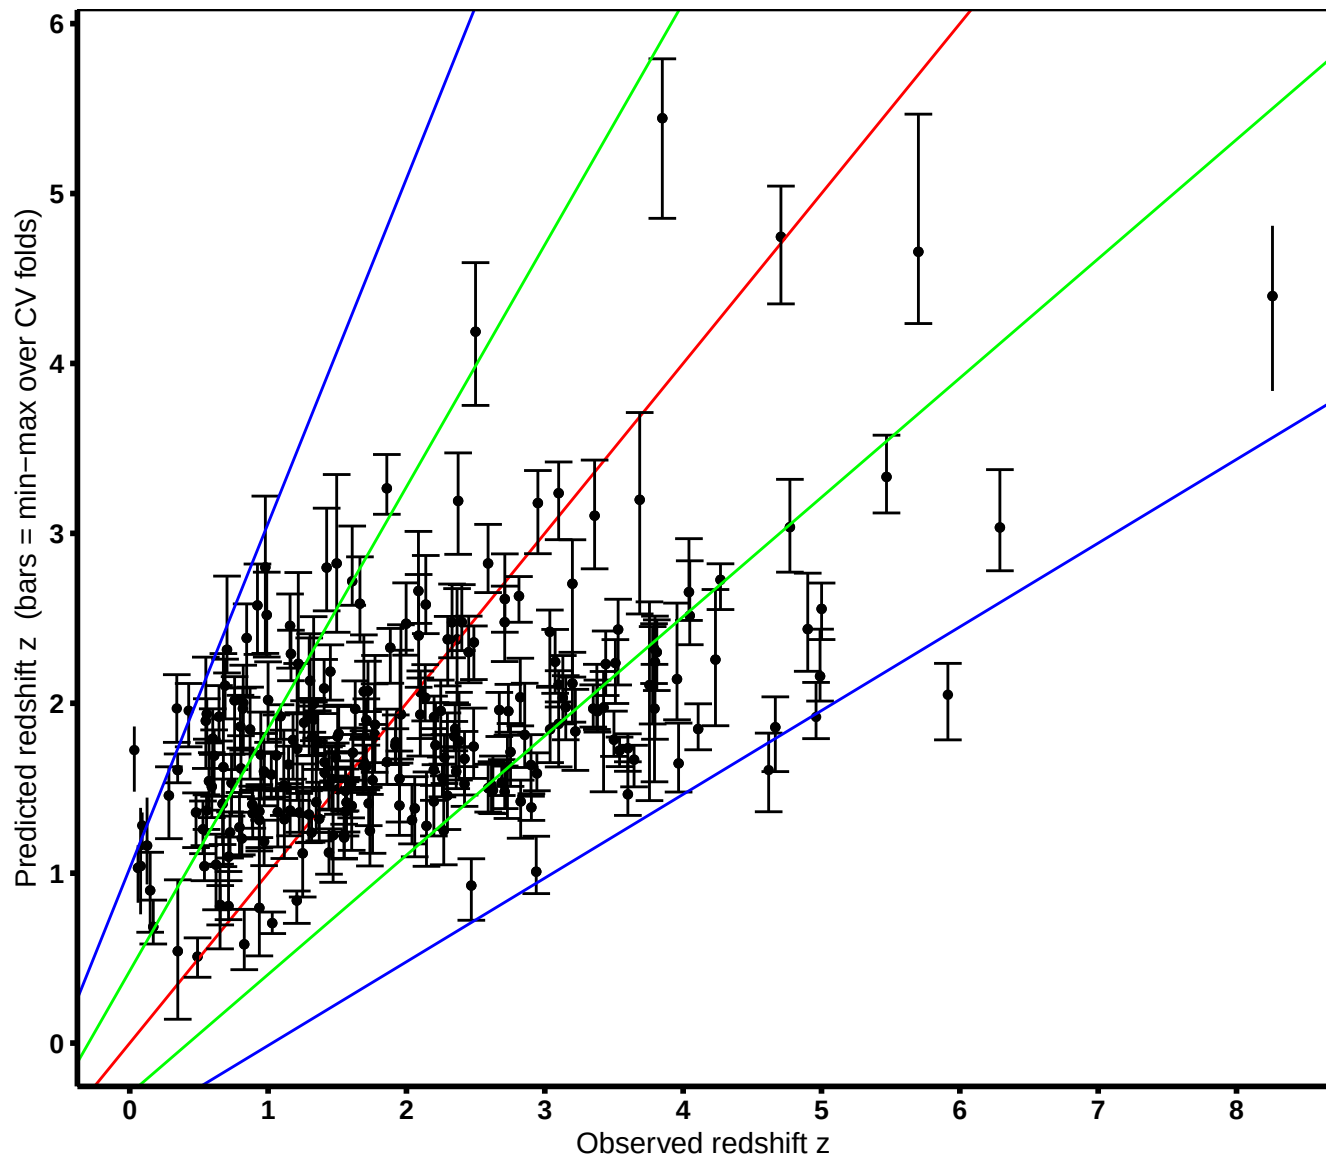

Cross-validated predicted vs. observed redshift z

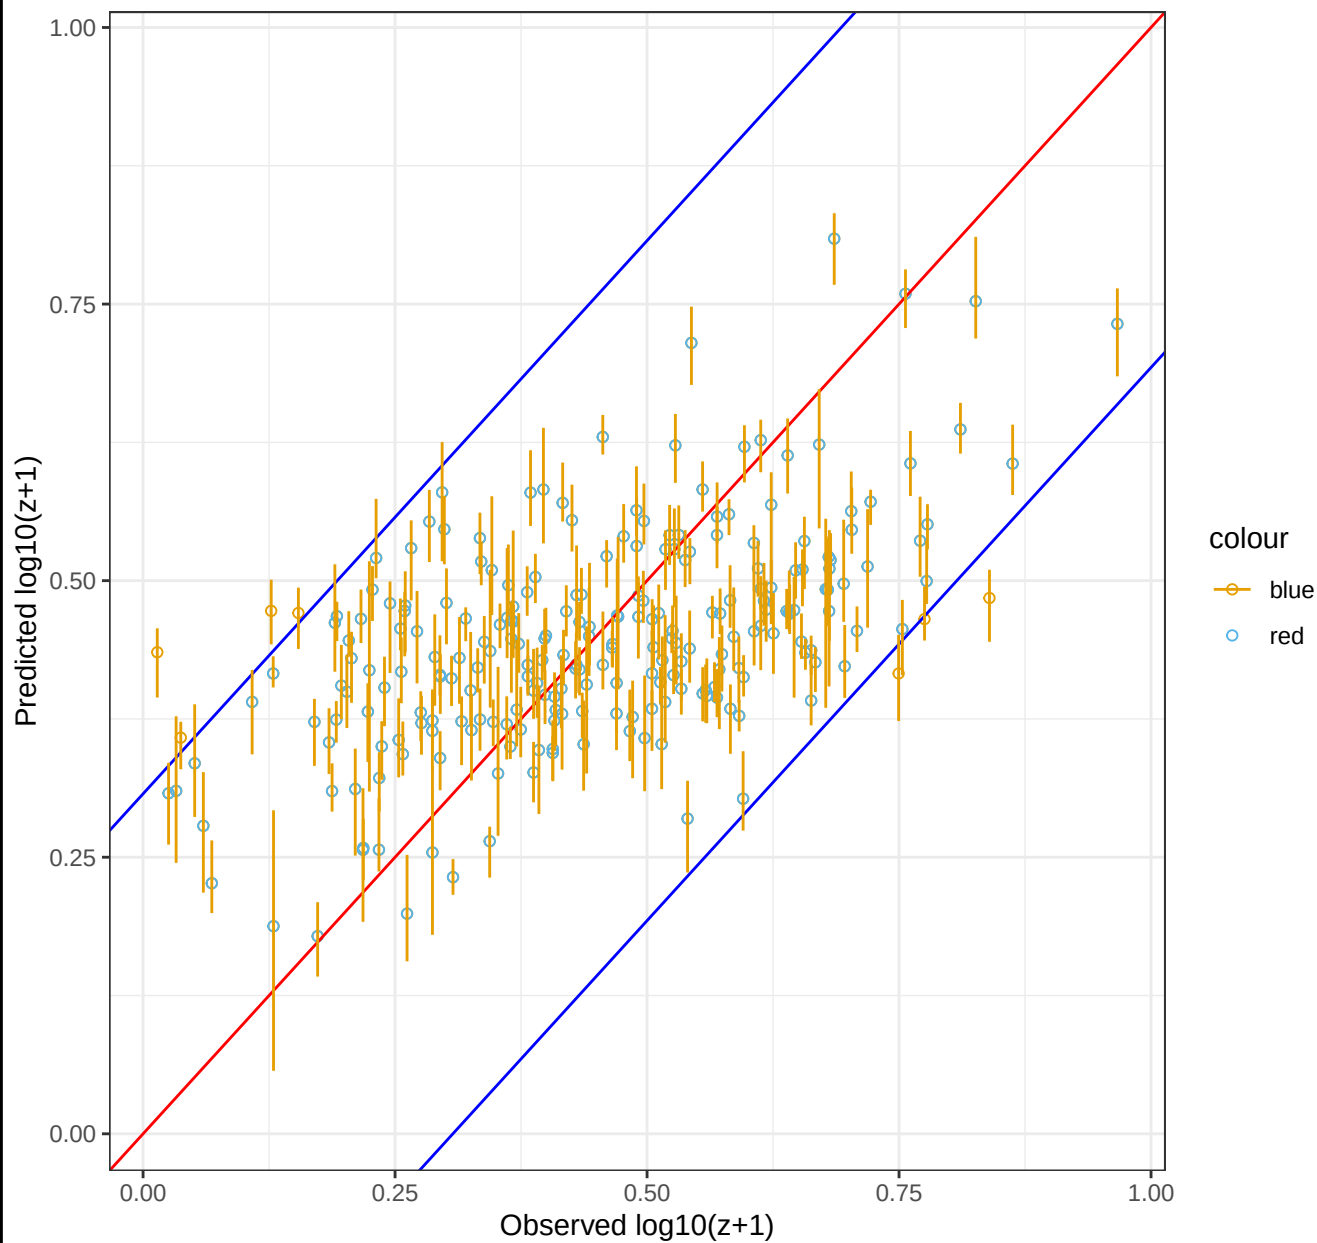

Sample = 240 GRBs | within 2-sigma cone = 233 (97%)

within 1-sigma cone = 151 (63%)

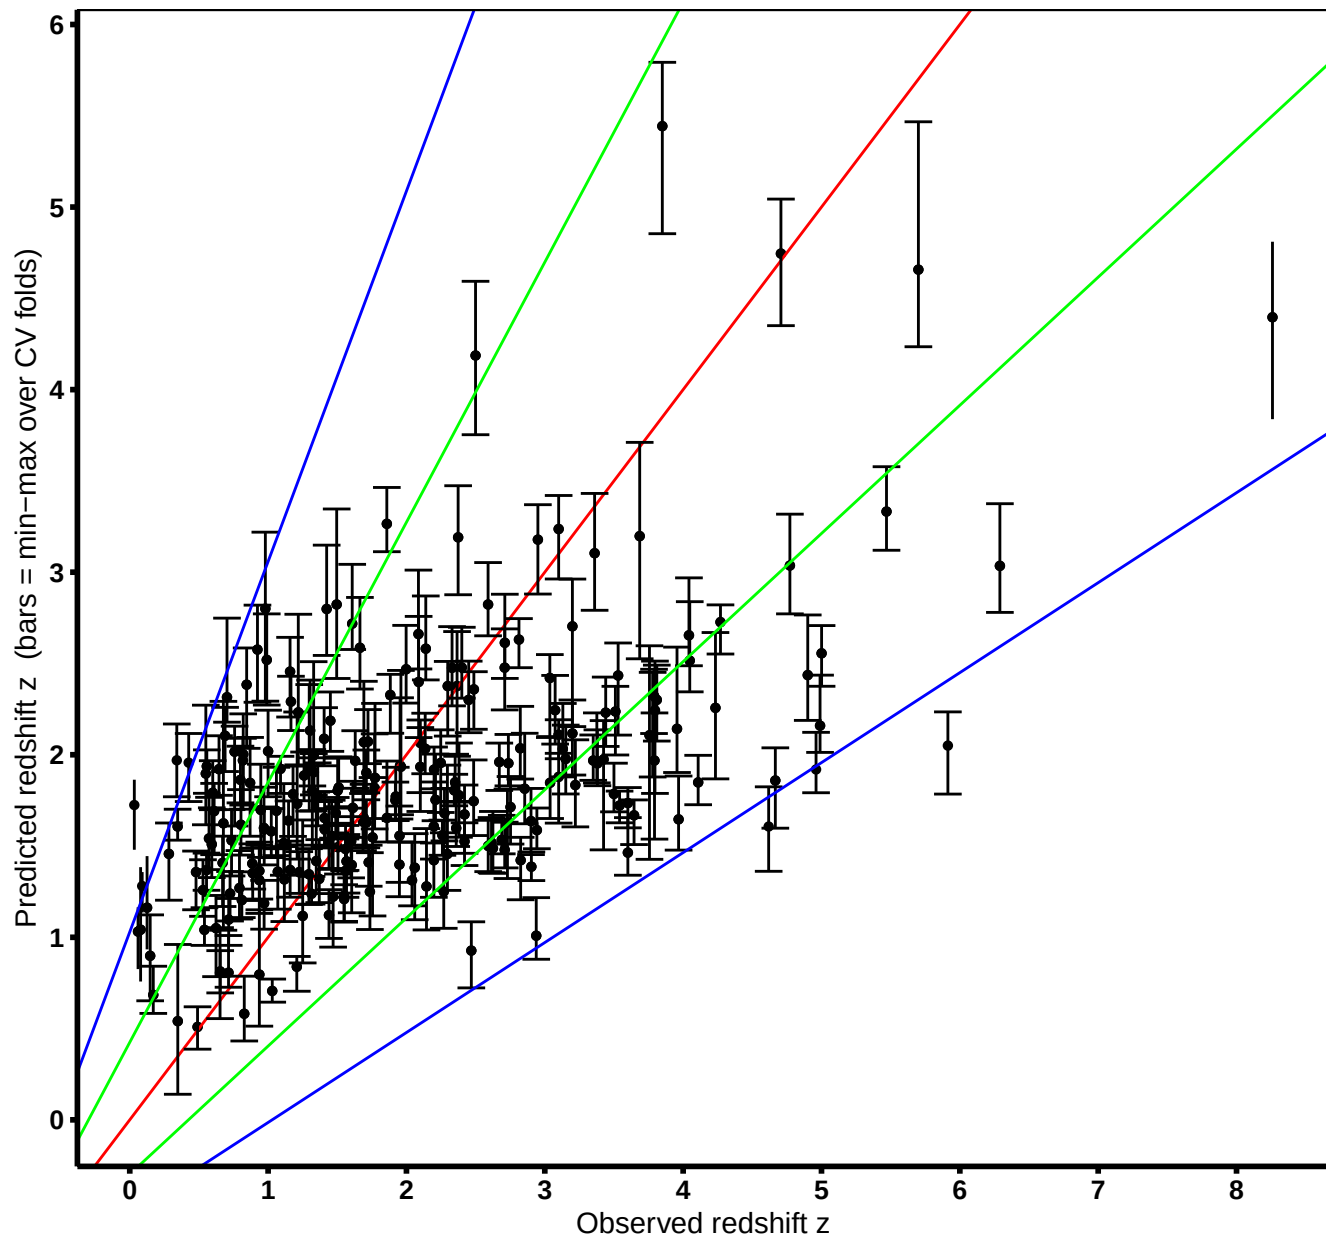

$r = 0.549$ | Sigma = 1.1 | RMS = 1.1 | Bias = 0.18 | NMAD = 1.56

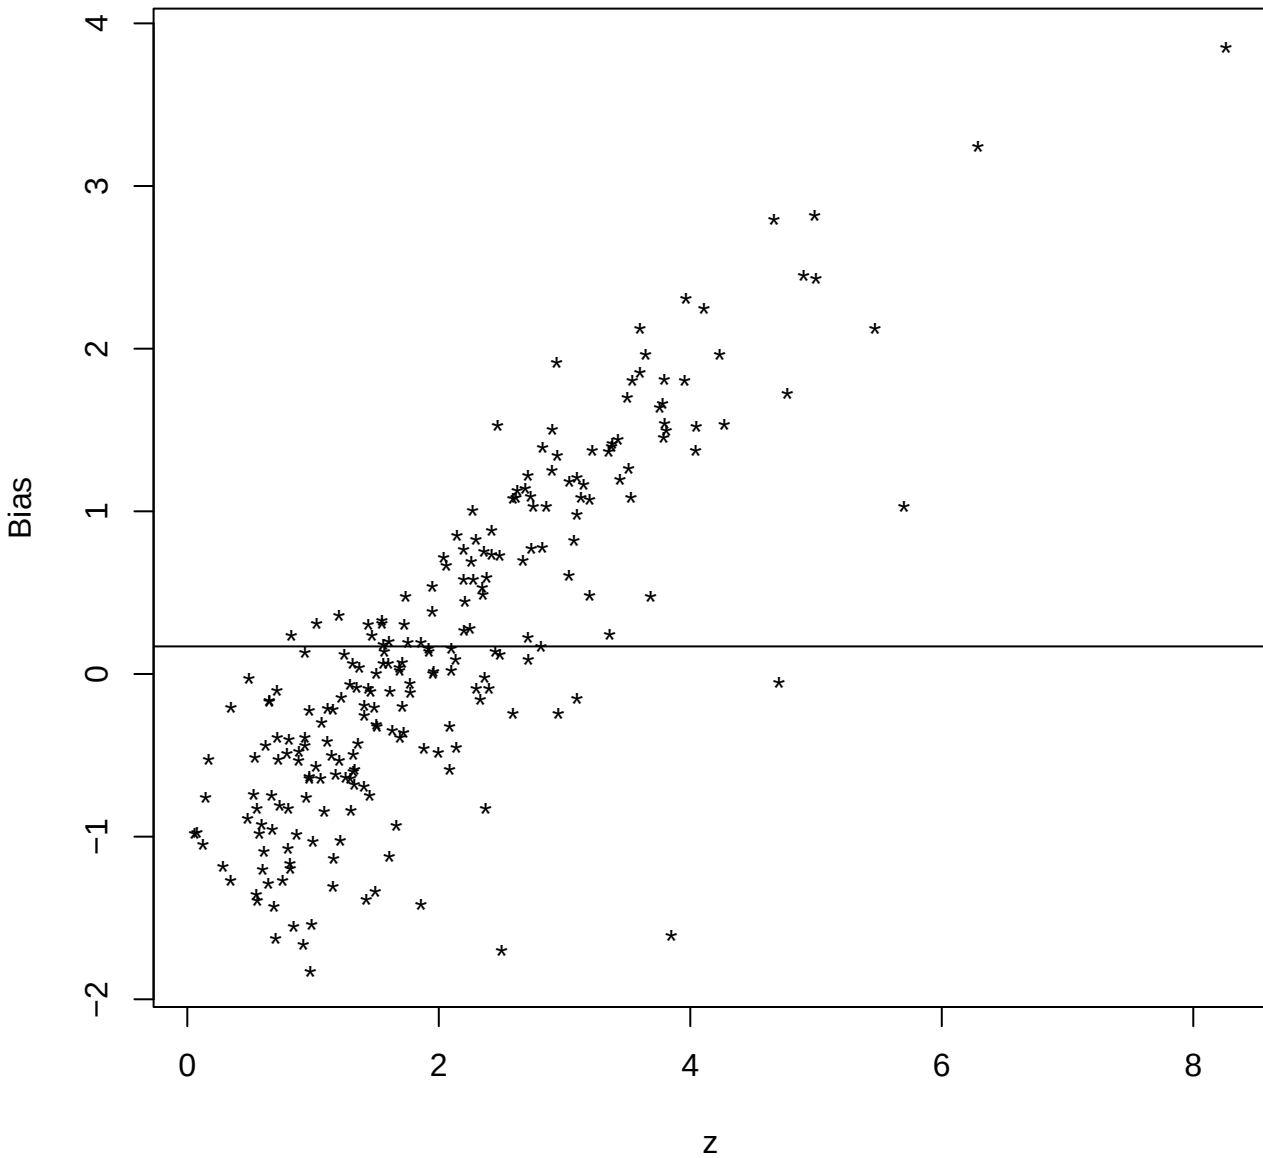

Predicted vs. observed $\log_{10}(z+1)$
(cross-validated)

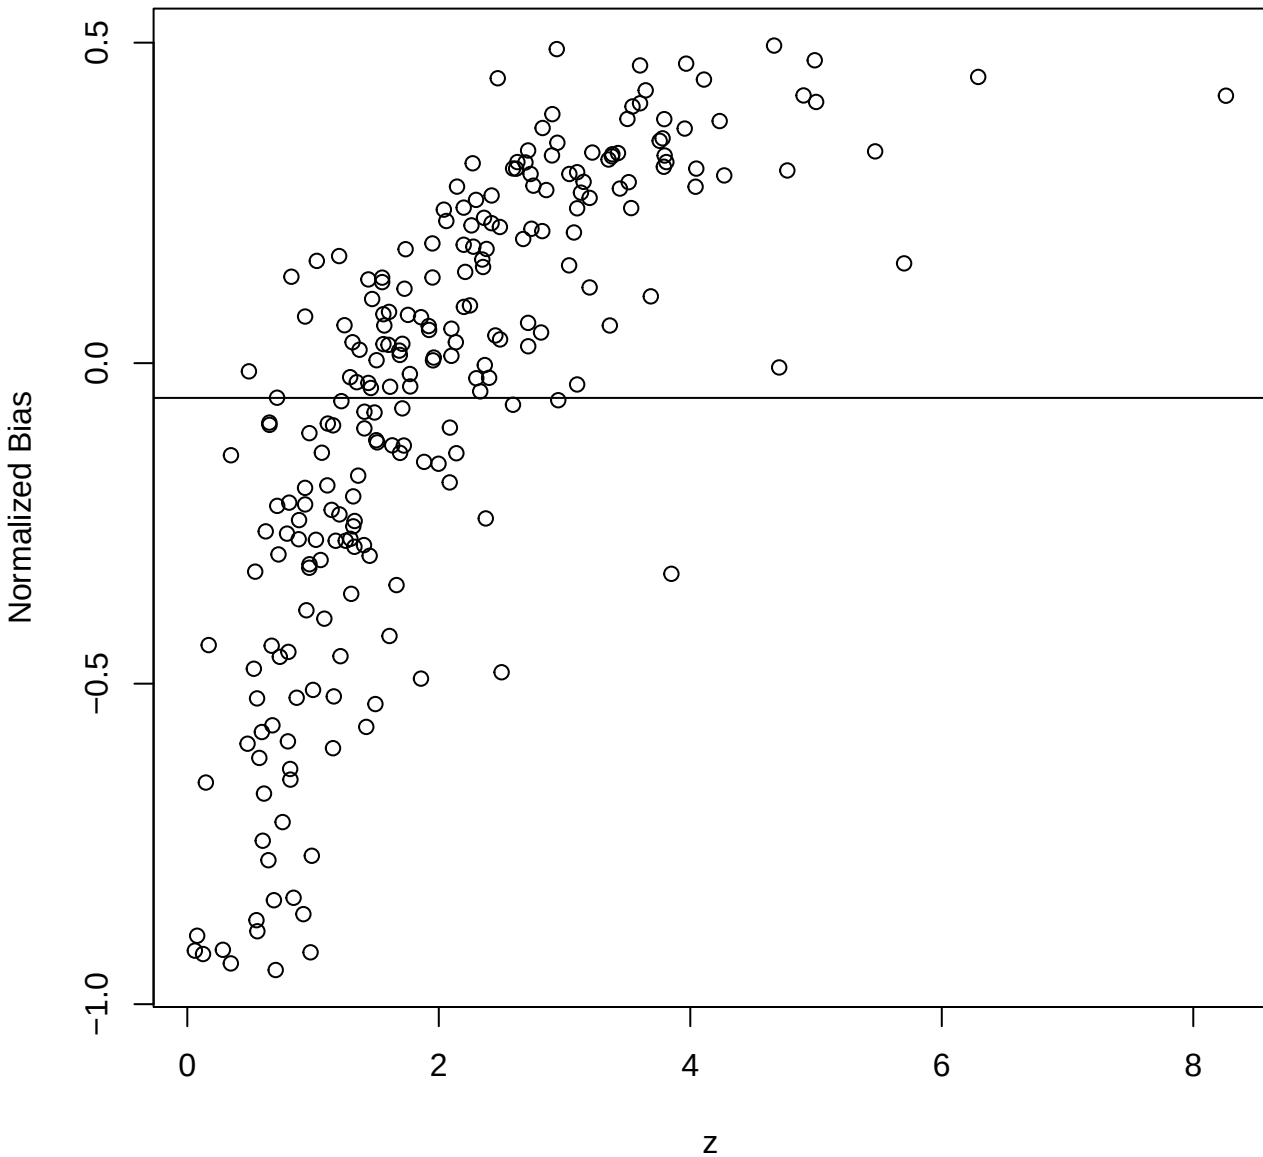

Predicted vs. observed redshift z
(cross-validated)

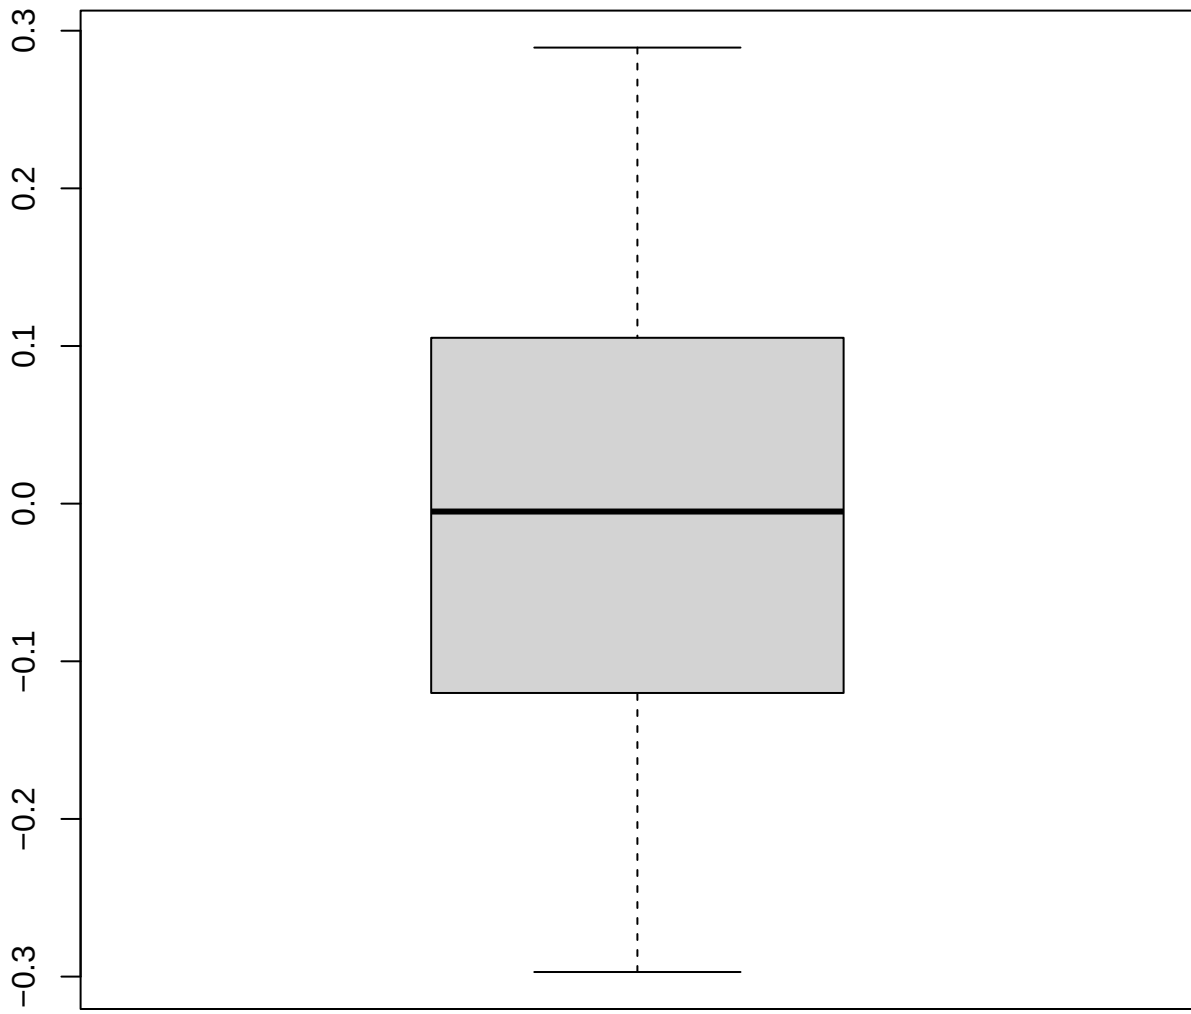

Redshift vs Bias

Redshift vs Normalized Bias

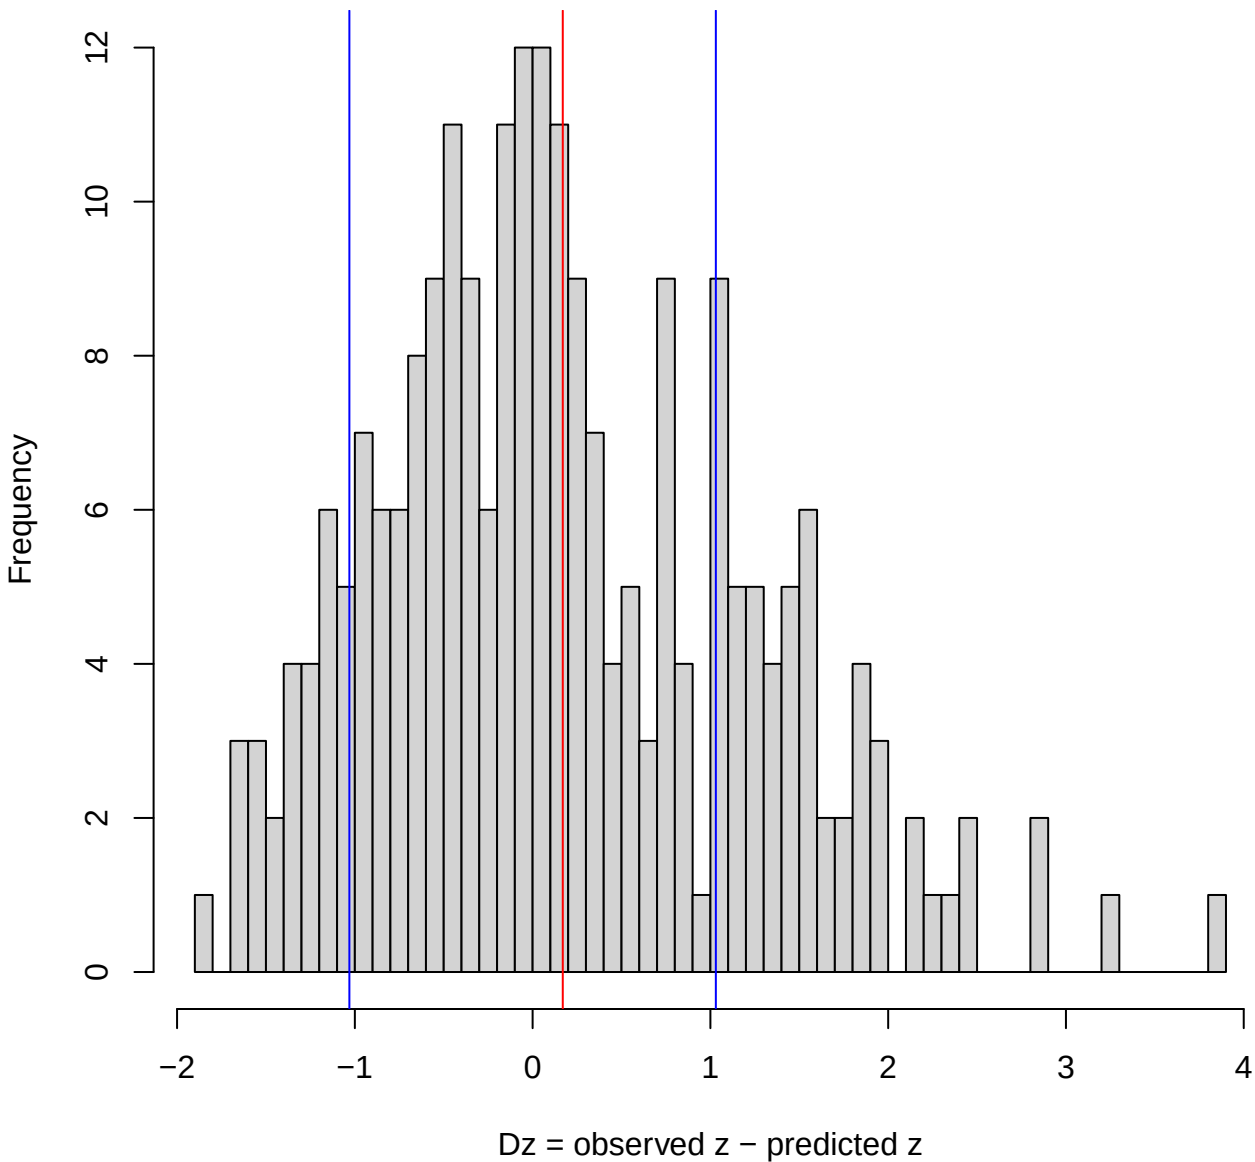

Redshift residual distribution ($Dz = \text{obs } z - \text{pred } z$)

Sigma=1.03, Bias=0.17

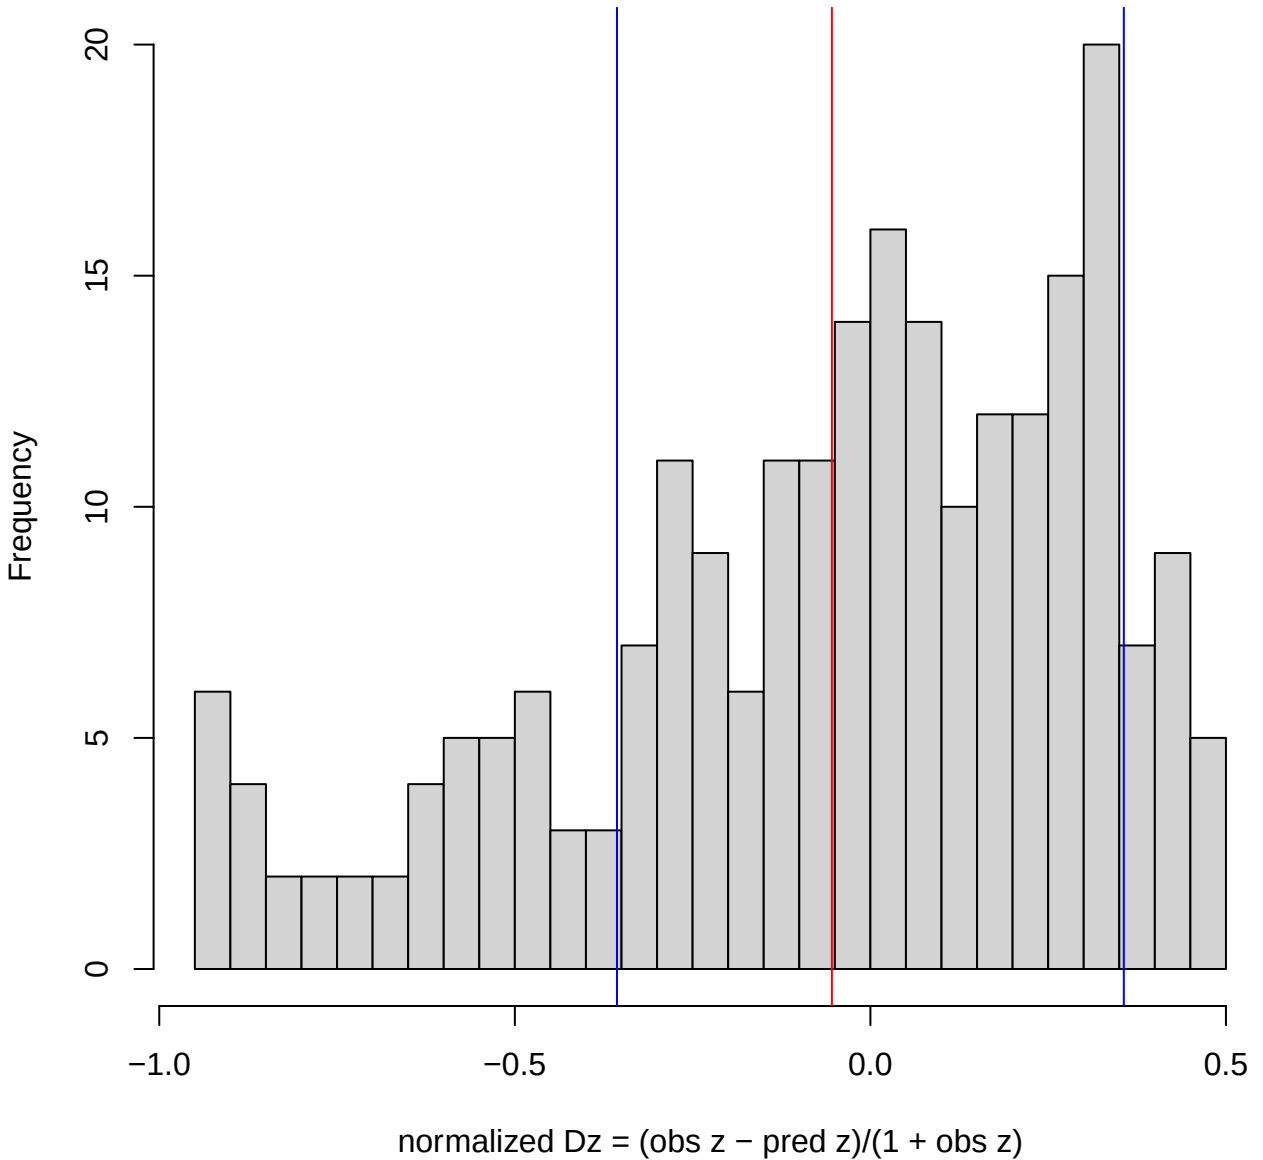

(blue = $\pm$ -Sigma, red = Bias)

Normalized residual distribution (normalized $Dz = (\text{obs } z - \text{pred } z)/(1 + \text{obs } z)$)

Sigma=0.356, Bias=-0.0542

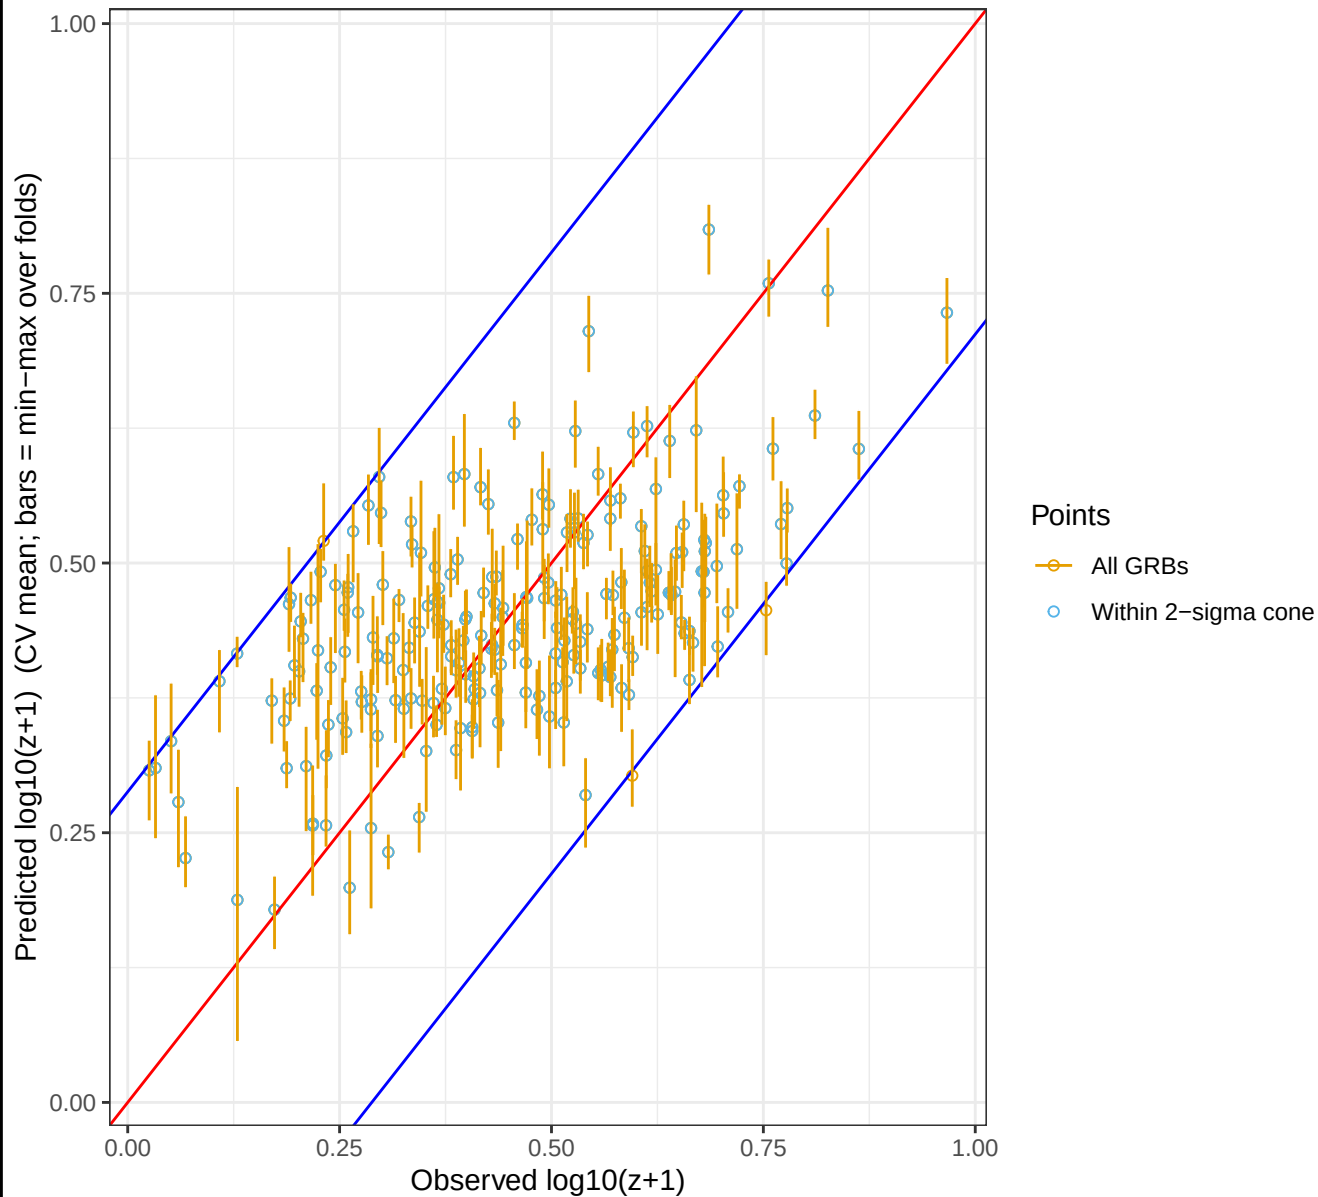

(blue = $\pm$ -Sigma, red = Bias)

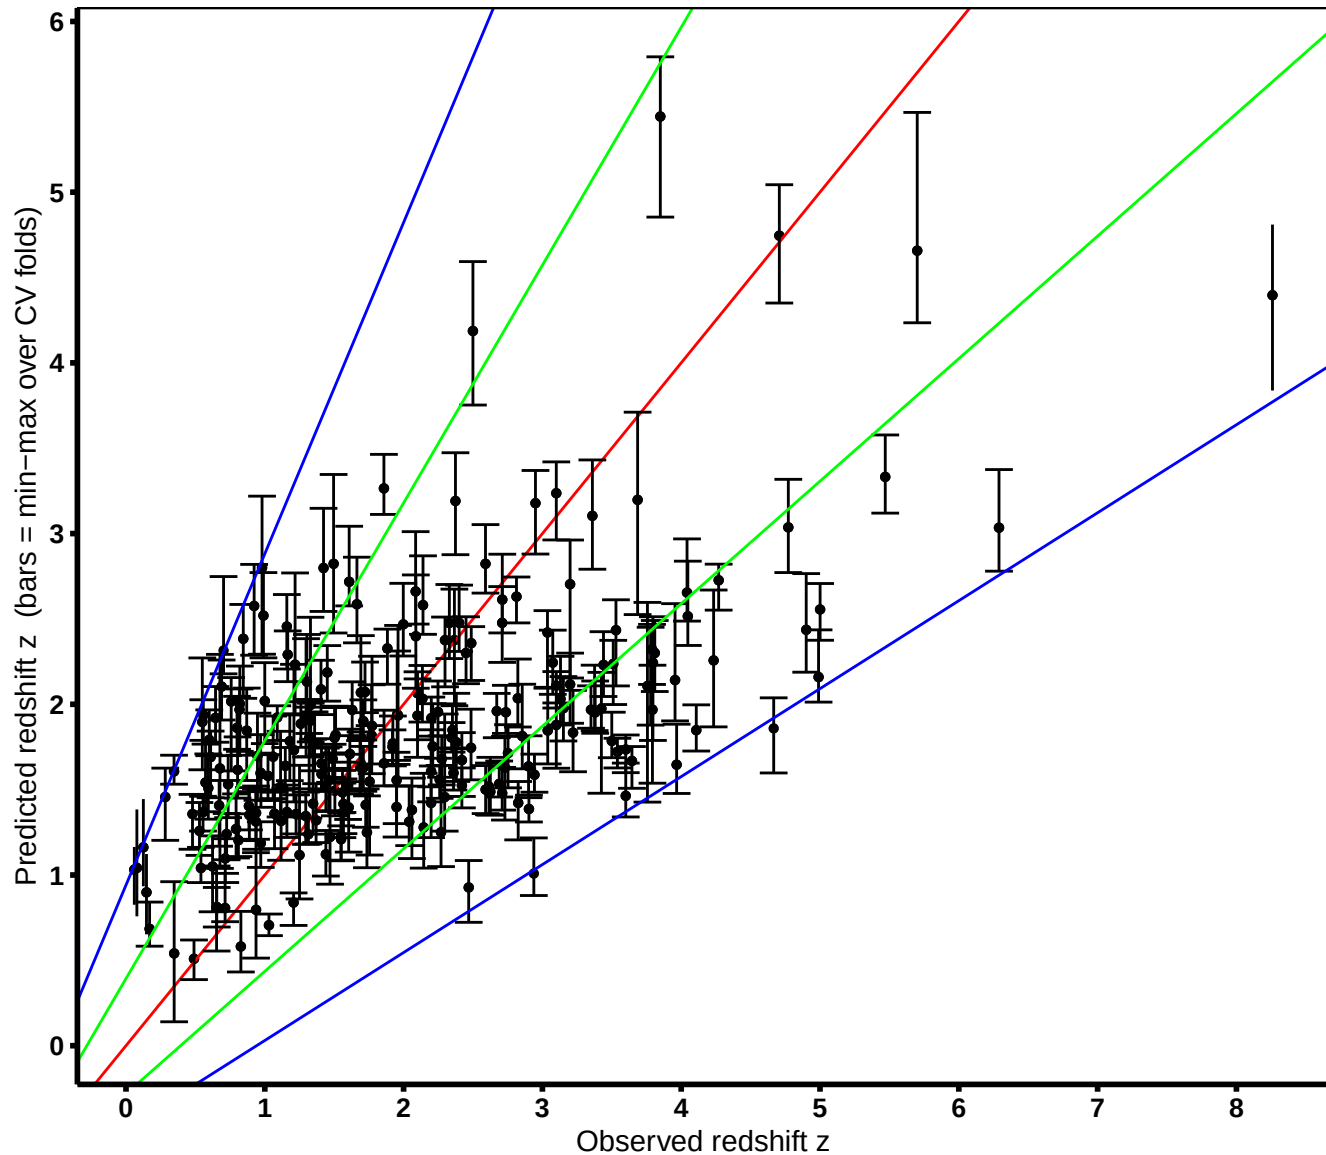

Cross-validated predicted vs. observed $\log_{10}(z+1)$

Sample = 233 GRBs | within 2-sigma cone = 230 (99%)

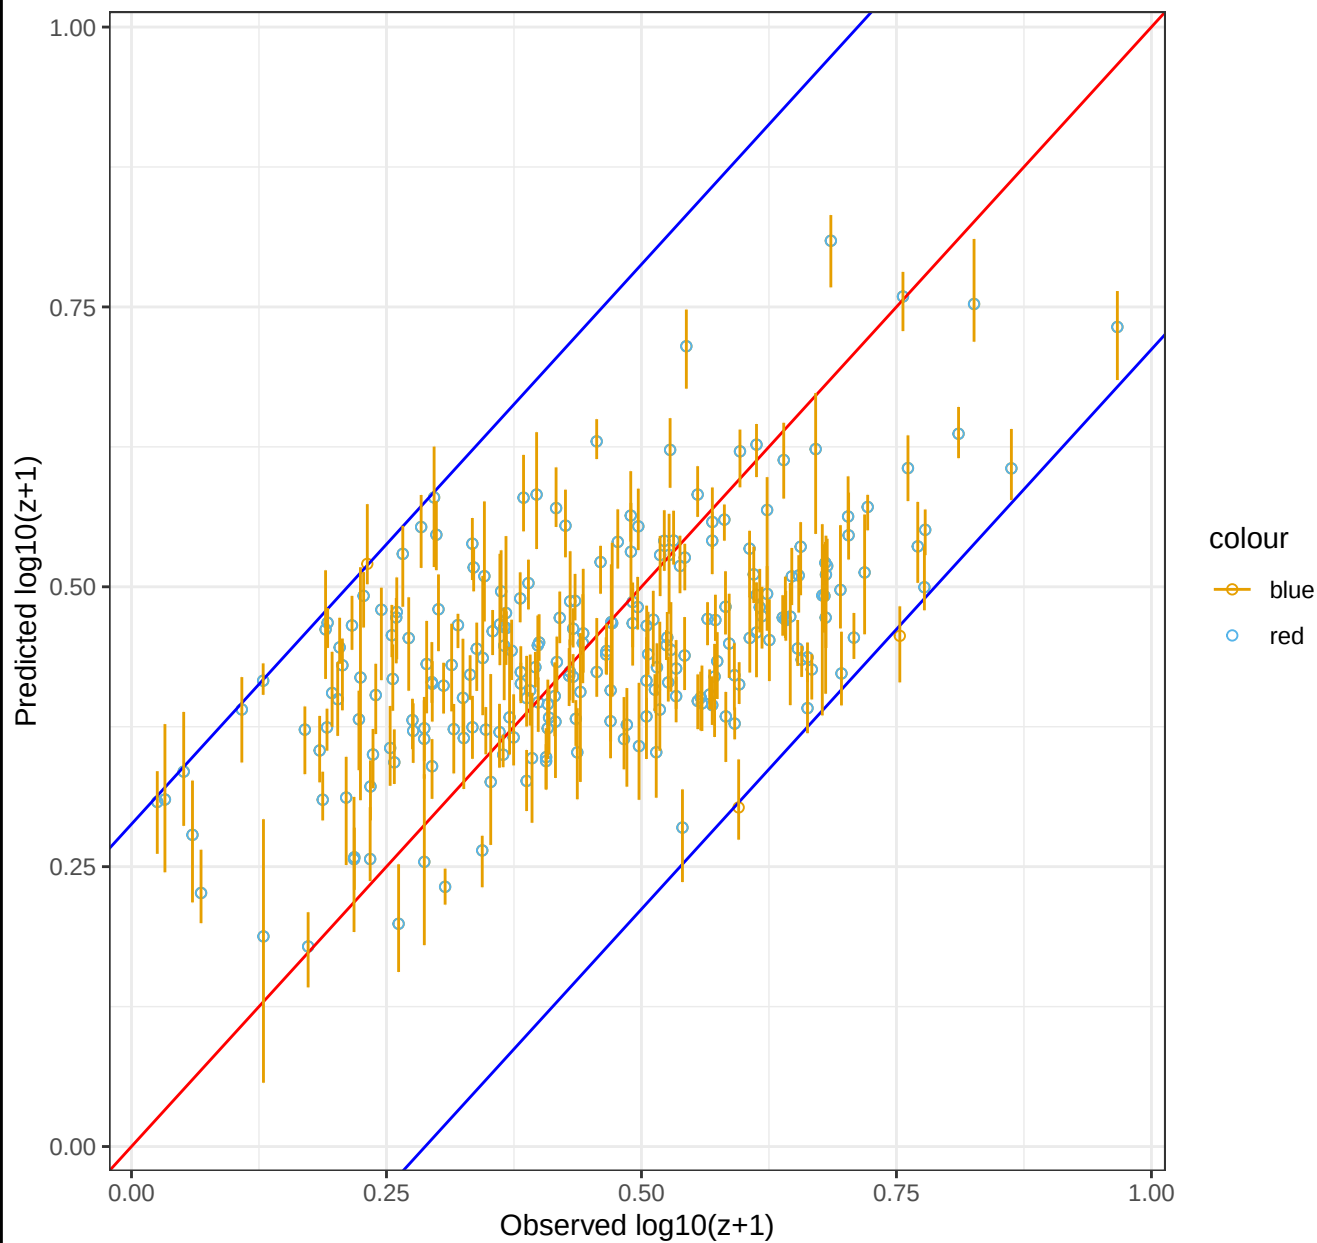

$r = 0.5674$ | $\text{Sigma} = 0.144$ | $\text{RMS} = 0.144$ | $\text{Bias} = 0.001$ | $\text{NMAD} = 0.158$

Cross-validated predicted vs. observed redshift z
Sample = 233 GRBs | within 2-sigma cone = 230 (99%)
within 1-sigma cone = 144 (62%)
 $r = 0.575$ | Sigma = 1.03 | RMS = 1 | Bias = 0.17 | NMAD = 1.48

Predicted vs. observed $\log_{10}(z+1)$
(cross-validated)

Predicted vs. observed redshift z
(cross-validated)
