

SuperLearner ensemble weights (unsorted)

Redshift vs Bias

Redshift vs Normalized Bias

Redshift residual distribution ($Dz = \text{obs } z - \text{pred } z$)

Sigma=1.05, Bias=0.166

(blue = $\pm$ Sigma, red = Bias)

Normalized residual distribution (normalized $D_z = (\text{obs } z - \text{pred } z)/(1 + \text{obs } z)$)
Sigma=0.35, Bias=-0.0565
(blue = $\pm$ Sigma, red = Bias)

Cross-validated predicted vs. observed $\log_{10}(z+1)$

Sample = 216 GRBs | within 2-sigma cone = 209 (97%)

$r = 0.5963$ | $\text{Sigma} = 0.143$ | $\text{RMS} = 0.142$ | $\text{Bias} = -0.00062$ | $\text{NMAD} = 0.147$

Cross-validated predicted vs. observed redshift z
Sample = 216 GRBs | within 2-sigma cone = 209 (97%)
within 1-sigma cone = 144 (67%)
 $r = 0.571$ | $\text{Sigma} = 1.05$ | $\text{RMS} = 1.1$ | $\text{Bias} = 0.17$ | $\text{NMAD} = 1.42$

Predicted vs. observed $\log_{10}(z+1)$
(cross-validated)

Predicted vs. observed redshift z
(cross-validated)

Redshift vs Bias

Redshift vs Normalized Bias

Redshift residual distribution ($Dz = \text{obs } z - \text{pred } z$)

Sigma=0.968, Bias=0.178

(blue = $\pm$ -Sigma, red = Bias)

Normalized residual distribution (normalized $D_z = (\text{obs } z - \text{pred } z)/(1 + \text{obs } z)$)

Sigma=0.313, Bias=-0.0377

(blue = $\pm$ -Sigma, red = Bias)

Cross-validated predicted vs. observed $\log_{10}(z+1)$

Sample = 209 GRBs | within 2-sigma cone = 203 (97%)

$r = 0.637$ | $\text{Sigma} = 0.133$ | $\text{RMS} = 0.132$ | $\text{Bias} = 0.0038$ | $\text{NMAD} = 0.144$

Cross-validated predicted vs. observed redshift z
Sample = 209 GRBs | within 2-sigma cone = 203 (97%)
within 1-sigma cone = 132 (63%)
 $r = 0.615$ | $\text{Sigma} = 0.968$ | $\text{RMS} = 0.98$ | $\text{Bias} = 0.18$ | $\text{NMAD} = 1.39$

Predicted vs. observed $\log_{10}(z+1)$
(cross-validated)

Predicted vs. observed redshift z
